

ABSTRACT

5 A printhead assembly is provided, comprising at least two printhead modules, each comprising at least two printhead integrated circuits, each of which has nozzles formed therein for delivering printing fluid onto the surface of print media, and a support member supporting the at least two printhead integrated circuits, and a casing in which the at least two printhead modules are arranged so as to be removably mounted in linearly aligned relationship. The support member has at least one longitudinally extending channel for carrying the printing fluid for the printhead integrated circuits, and each printhead module has end portions which permit interconnection of the linearly aligned printhead modules and provide for fluid connection of the
10 channels of the support members thereof.
